BAVONVIT SURIN

SUMMARY

Fourth-year Computer Science student at the University of the Thai Chamber of Commerce (UTCC), seeking an AI Engineer internship. Hands-on experience contributing to the end-to-end development of a computer vision system, including dataset annotation with Roboflow, YOLO model training, image processing with OpenCV, Braille decoding, and text-to-speech integration. Additional experience developing REST APIs with Spring Boot, managing PostgreSQL databases on Supabase, and collaborating with teammates who integrated the Gemini API into an AI chatbot.

PROJECTS

2026 **Braille-to-Speech Scanner | Computer Vision Project**

Python, YOLO, OpenCV, Roboflow, Git/GitHub

- Contributed to the end-to-end development of a camera-based Braille-to-Speech system.
- Prepared and annotated a Braille image dataset using Roboflow and trained a YOLO detection model.
- Used OpenCV to connect camera-based detection with Thai Braille decoding and text-to-speech output.
- Tested the system workflow and managed team collaboration using Git and GitHub.

2025 - 2026 **UTCC Recommendation Website | Full-stack Project**

JavaScript, HTML, CSS, Java, Spring Boot, PostgreSQL/Supabase

- Developed a university place recommendation website with maps and reviews.
- Implemented search, category filtering, and dynamic content updates using JavaScript, with data retrieved from REST APIs.
- Built REST APIs and integrated PostgreSQL/Supabase to manage places, categories, and reviews.
- Created manual test cases and API checks to verify application behavior and document defects.

2024 - 2025 **Food Ordering Android Application | Mobile Project**

Kotlin, Android SDK, SQLite, XML

- Developed an Android food ordering app with menu browsing, a shopping cart, and order confirmation.
- Implemented SQLite storage, quantity updates, and automatic calculation of cart totals.

EDUCATION

2023-2027 (Expected)
University of the Thai Chamber of Commerce (UTCC)

Bachelor of Science in Computer Science 4th-year GPAX: 3.58

Relevant Coursework: Software Engineering, Database Management, Data Structures, Web Development, Mobile Application Development, and Artificial Intelligence.
Gained hands-on experience through software development projects involving full-stack systems, databases, Android applications, computer vision, and basic software testing concepts.

TECHNICAL SKILLS

- **Programming Languages:** Python, JavaScript, Java, Kotlin
- **AI and Computer Vision:** YOLO, OpenCV, dataset preparation, image annotation, object detection, model training
- **Back-End and APIs:** Spring Boot, REST APIs
- **Databases:** PostgreSQL, Supabase, SQLite
- **Tools:** Roboflow, Git, GitHub, Postman, Android Studio
- **Web Technologies:** HTML, CSS, JavaScript
